

Heidi Marie Meudt

Class of 1992

Ph.D. University of Texas at Austin in Botany

B.S. University of Wisconsin-Stevens Point in Biology & Spanish

Heidi Meudt has spent her life pursuing her passions of science and languages. Since completing her Ph.D. in 2004 and a postdoctoral fellowship in 2006, Heidi has worked at New Zealand's national museum in Wellington and then the Curator of Botany. After traveling and studying extensively throughout South America, Heidi now conducts plant research in New Zealand where she has described and named several new species and subspecies of plants as well as supervising the work of graduate level students. Heidi advises students to do something to the best of their ability by doing it well, especially when nobody else is looking.
